

DESIGN SYSTEM AUDIT FRAMEWORK

Turn Your Design System Into an Enterprise Asset.

125 criteria · AI-native auditing · L1-L5 maturity scoring

Open-source · WCAG 2.2 · EU AI Act · Vietnam PDPL

v1.0 · 2026

audit.cyberskill.world

Most Design Systems Are Flying Blind.

Unmeasured

No scoring, no benchmarks — teams can't answer 'how good is our system?'

Not AI-ready

LLMs amplify design inconsistencies rather than resolving them

Inconsistent

Manual audits done ad-hoc produce different results every time

Non-compliant

WCAG, EU AI Act, and PDPL obligations are missed until audits or lawsuits

One Framework. 125 Criteria. Zero Guesswork.

The CyberSkill Design System Audit Framework is a vendor-neutral, open-source standard for measuring, scoring, and systematically improving enterprise design systems.

01

SCAN

AI agent scores all 125 criteria against your system. Full confidence citations. One command.

02

FIX

Approved findings get remediation steps generated automatically. Apply, verify, re-score.

03

MONITOR

Quarterly dynamic re-scores + annual full audit. No regression allowed by the no-downgrade rule.

125 Criteria Across 20 Categories.

PART A — System Quality (63 criteria)

- A.1 Foundations & Tokens
- A.2 Component Library
- A.3 Documentation
- A.4 Governance
- A.5 Tooling & Distribution
- A.6 Cross-platform
- A.7 Adoption & Metrics
- A.8 Accessibility
- A.9 Performance & DX
- A.10 AI / Emerging Tech

PART B — UX Quality (62 criteria)

- B.1 User Research
- B.2 IA & Navigation
- B.3 Interaction Design
- B.4 Visual Design
- B.5 Accessibility & Inclusive
- B.6 Content Design
- B.7 Heuristic Compliance
- B.8 Performance & CWV
- B.9 Trust, Privacy & Ethics
- B.10 Measurement

Five Tiers from Chaos to Enterprise-Grade.

	L1	Initial	< 40%	Ad-hoc. No token system. No documentation.
	L2	Developing	40–55%	Basic tokens & components. Inconsistent governance.
	L3	Defined	55–70%	Documented system. Adoption starting. Gaps remain.
	L4	Managed	70–85%	Measured. Multi-platform. Accessibility enforced.
	L5	Optimised	≥ 85%	Enterprise-grade. AI-native. Continuous improvement.

Built for the Age of AI-Assisted Development.

AI **LLM Prompt Packs**

SCAN, FIX, research, and plan prompts pre-written for Claude, Cursor, and GitHub Copilot. Paste and run.

AI **MCP Server**

Model Context Protocol server exposes design tokens, doctrine, and audit status to any AI agent — natively composable.

AI **No-Downgrade Rule**

Scores can only move up. Any agent or human that would lower a score must flag it for co-auditor review.

AI **Confidence Scoring**

Every criterion carries Hi / Med / Lo confidence and at least one citation. No hallucination-only scores.

74.7% → 84.6% in a Single Audit Cycle.

CyberSkill dogfooded the framework on its own Design System (v1.0, April 2026). Here's what one cycle delivered.

+9.9pp

Single-cycle improvement

7/7

Enterprise thresholds passed

84%

Confidence rated Hi across 125
criteria

0

Regressions introduced

Biggest gains:

A.10 AI/Emerging Tech +27.0pp · A.9 Performance & DX +23.7pp · A.5 Tooling & Distribution +19.7pp

Regulatory Compliance Is Part of the Score, Not an Afterthought.

WCAG 2.2 AA

All 87 success criteria mapped to framework categories. A.8 and B.5 both require $\geq 75\%$ to pass enterprise threshold.

EU AI Act

AI transparency, human oversight, and prohibited-practice checks wired into A.10 and B.9. High-risk obligations from Aug 2026.

Vietnam PDPL

Law 91/2025/QH15 + Decree 356/2025 in force Jan 2026. Consent-first patterns required; B.9 Trust & Privacy enforces compliance.

EN 301 549

European Accessibility Act conformity standard. Presumed compliance for EAA enforcement active Jun 2025.
